Sam and Jordan

Financial plan · Calculated November 11, 2026 · Every figure in today's dollars

RetCalc
The complete retirement planning toolkit

Points along the way

1. **Today, 2026.** Sam 42, Jordan 40.
2. **Nora's college begins, 2035.** 4 years of it.
3. **Mortgage paid off, 2044.** At today's payment.
4. **Sam retires, 2044.** Sam 60, Jordan 58.
5. **Jordan retires, 2048.** Sam 64, Jordan 62.
6. **Medicare, 2049.** At 65 for each of you.
7. **Social Security, 2051.** Each of you claims at 67.
8. **Required withdrawals, 2059.** The IRS sets a minimum from traditional accounts.

Will it last?

100%

It lasted to 96 in every retirement since 1926. Drawing down with Guyton-Klinger Guardrails.

Readiness

96 / 100

On track. Page 14 shows each area.

Net worth today

$610,500

$943,000 in assets, $332,500 owed, as of October 20, 2026.

At retirement

$1.89M

in savings at 60, in 2044. Social Security adds $5,000 per month together.

An educational plan, not financial advice. Past returns don't predict future ones.

You're on track: the plan lasted in every past retirement since 1926.

This report is your Dashboard on paper: what you have and owe, where each month's pay goes, what you save, then the retirement it builds toward, how that holds up against every market since 1926, your readiness score and the next steps. Every figure is in today's dollars, so $7,800 means what $7,800 buys now.

How to use this report

Read pages 2 to 15 together

Your money today, the plan, how it holds up and what to do next, in plain words.

Hand pages 17 to 19 to an advisor

The assumptions, the method, and every year of the plan in a table.

Print a new one after each update

Update your balances on the Dashboard every month or so, and the whole report follows.

Where to start

1 Save $527 per month for college

You plan to help with college, and saving ahead keeps it out of your saving later.

On Spending

2 Plan health cover until Medicare

3 years with no job's plan, 2048 to 2051.

On Retirement

3 Build 6 months of cash

You have 3.1 months set aside.

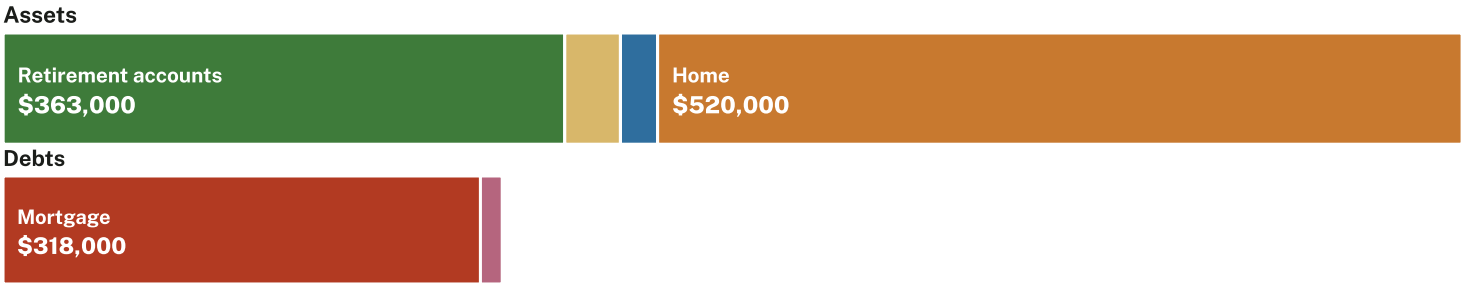

On Spending

Net worth

$610,500 today: $943,000 you have, $332,500 you owe.

From your balances of October 20, 2026. Since October 15, 2025, net worth has grown by **$107,627**. Retirement accounts, the brokerage and cash feed the plan; the home counts in net worth and the mortgage is paid from your budget.

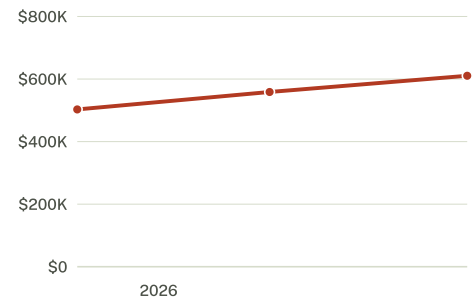

What you have and what you owe

Assets

Account	Kind	Whose	Balance	Notes
Sam's 401(k)	401(k), 403(b)	Sam	$212,000	
Jordan's 403(b)	401(k), 403(b)	Jordan	$98,000	
Roth IRA	Roth	Sam	$41,000	$30,000 contributed
HSA	HSA	Sam	$12,000	
Brokerage	Brokerage	Shared	$36,000	+$8,000 gain
Emergency savings	Cash	Shared	$24,000	
Home	Home	Shared	$520,000	
All assets			**$943,000**	

Net worth at each update

3

balance updates since 2025

+$51,865

since the update before, April 15, 2026

Debts

Debt	Kind	Whose	Rate	Owed
Mortgage	Mortgage	Shared	4.25%	$318,000
Car loan	Car loan	Shared	5.9%	$14,500
All debts				**$332,500**

Every figure in today's dollars. Dashed figures are estimated.

Income and taxes

$17,833 per month before taxes, $13,806 after.

Taxes here are this year's, worked out by the Dashboard's paycheck calculator with your filing status, Illinois, your deductions and what goes in before tax. Your employer adds **$535** per month on top.

Where each month's pay goes

Pay

Who	Pay per year	Entered as	Retires at
Sam	$128,000	$128,000 per year	60
Jordan	$86,000	$86,000 per year	62
Together	**$214,000**		

Taxes this year

Tax	Per year	Per month	Share of pay
Federal income tax	$23,084	$1,924	10.8%
State income tax	$8,878	$740	4.1%
Social Security and Medicare	$16,371	$1,364	7.6%
All taxes	**$48,333**	**$4,028**	**22.6%**

Each month

$13,806

after taxes.

Left over

$3,606 per month isn't assigned to saving or spending. Putting it to work is one of your next steps.

Your tax rate

22.6% of pay goes to taxes of every kind, 10.8% of it federal income tax.

The month in full

From pay before taxes	Per month	Per year	Share
Pay before taxes	$17,833	$214,000	100%
Taxes	–$4,028	–$48,333	23%
Saving and investing	–$2,400	–$28,800	13%
Spending	–$7,800	–$93,600	44%
Left over	**$3,606**	**$43,267**	**20%**
Plus your employer's match	$535	$6,420	

Every figure in today's dollars. Dashed figures are estimated.

$7,800 per month, $93,600 per year.

From your budget on the Dashboard's Spending tab: two lines in two groups. Once retired, the plan spends **$7,800** per month, the same as today.

By group, per month

The biggest lines

Everything else	$5,650
Rent / Mortgage	$2,150

Emergency fund

$46,800
your goal: six months of the spending it's sized on

$24,000
in checking and savings today

3.1
months set aside, $22,800 to go

Spending once retired

$7,800
per month the plan spends once retired, taxes paid on top

$1,962
per month in taxes in a typical retired year

$2,150
less per month once the mortgage is paid off in 2044: the plan takes it off retirement spending from then

Make it a budget

One number is enough for the plan, but a budget shows where each month goes and what to cut first. Add lines on the Dashboard's Spending tab (groceries, transportation, insurance, subscriptions) and the next report lists them by group, with the biggest first.

$2,935 per month into savings, 16% of pay.

That's $2,400 of your own and $535 from employers, the whole match. Saving follows pay: Pay keeps pace with inflation. Of each raise, you save the same share of pay as now. Each line stops at its legal limit. At 60 the plan has **$1.89M**, growing 4.5% per year after inflation.

Each line, per month today

Line	Per month	Limit per month	Limit
401(k) up to the match	$1,070	$1,070	At the limit
401(k) beyond the match	$1,330	$3,013	Room to grow
Employer match	$535		Follows the first line
All saving	**$2,935**		

By tax treatment, per month

$2,935

traditional: taxed when it comes out.

$0

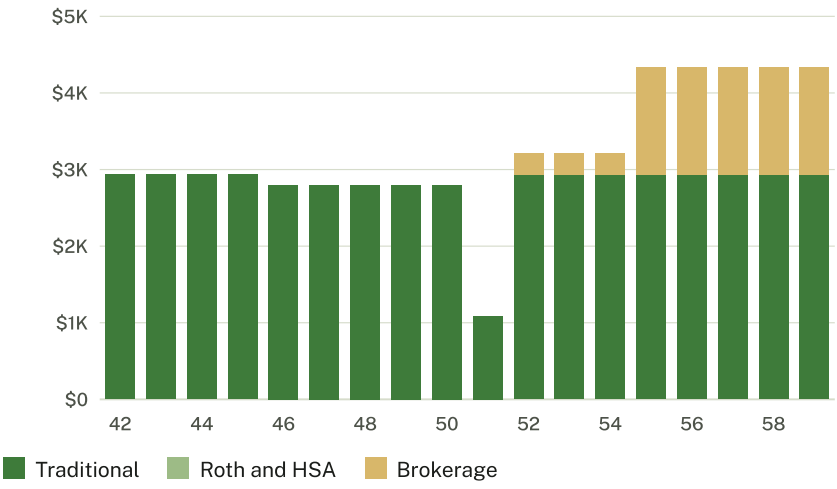

Roth and HSA: no tax on the way out.

Traditional includes the match, which is always pre-tax.

Each of you, per month

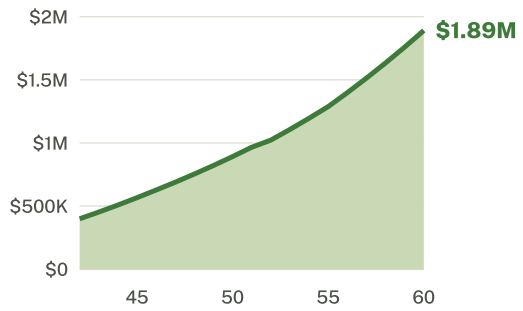

Who	Traditional	Roth and HSA	Of it, the match
Sam	$1,579	$0	$320
Jordan	$1,356	$0	$215

Saving each month, year by year to 60

From $1,085 to $4,335 per month as lines grow, children's costs come and go.

Savings at 60, by account

$1.6M
Traditional, 84%

$117K
Roth, 6%

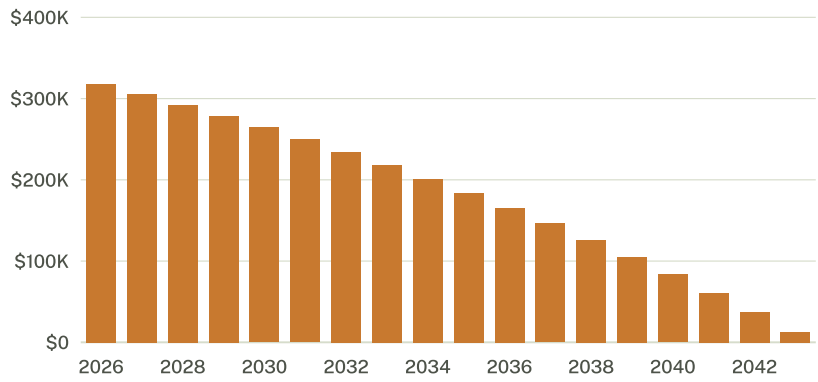

$185K
Brokerage, 10%

Every figure in today's dollars. Dashed figures are estimated.

$202,000 of your home is yours: worth $520,000, $318,000 left to pay.

At $2,150 per month and 4.25%, the mortgage is paid off in **2044**, when Sam is 60, the year of retirement. The home counts in your net worth but not in the savings the plan draws from in retirement.

What's owed each year, at today's payment

The mortgage

2044

the year it's paid off

$133,500

of interest still to pay

$2,150 per month

comes off retirement spending once it's paid (the plan does this for you).

What owning costs per month

Set what owning costs (property tax, insurance, upkeep, utilities) in the Mortgage Calculator on the Dashboard's Home tab, and those lines join your budget and this page.

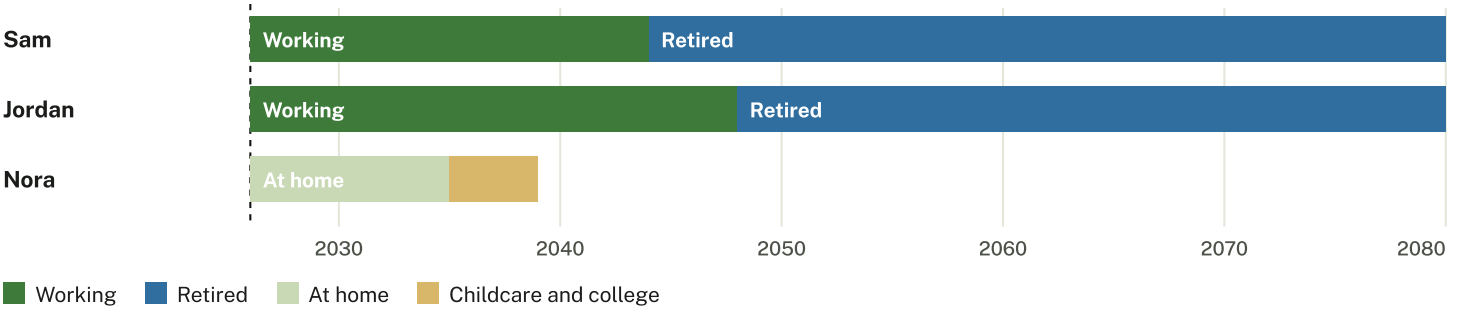

The loan, year by year

Year	Owed at the start	Interest	Paid down	Year	Owed at the start	Interest	Paid down
2026	$318,000	$13,273	$12,527	2035	$183,601	$7,448	$18,352
2027	$305,473	$12,730	$13,070	2036	$165,249	$6,653	$19,147
2028	$292,403	$12,164	$13,636	2037	$146,102	$5,823	$19,977
2029	$278,766	$11,573	$14,227	2038	$126,125	$4,957	$20,843
2030	$264,539	$10,956	$14,844	2039	$105,283	$4,054	$21,746
2031	$249,695	$10,313	$15,487	2040	$83,537	$3,112	$22,688
2032	$234,208	$9,641	$16,159	2041	$60,849	$2,128	$23,672
2033	$218,049	$8,941	$16,859	2042	$37,177	$1,103	$24,697
2034	$201,190	$8,211	$17,589	2043	$12,480	$153	$12,480

One child in the plan, and part of college from you.

Children you have now are already in today's spending. What changes as they grow (childcare, the teen years, the day they leave home) comes out of your saving in the years it happens, so the plan's saving moves with them. College takes **$527** per month saved ahead; you set aside $0 now.

Your household along the years

Each child

Child	Born	Today	College	Per year of college
Nora	2017	Age 9	2035 to 2039	$13,500

$54,000
of college from you, in today's dollars

$527
per month to save ahead for it

$0
per month set aside today

Saving through the stages, per month with the match

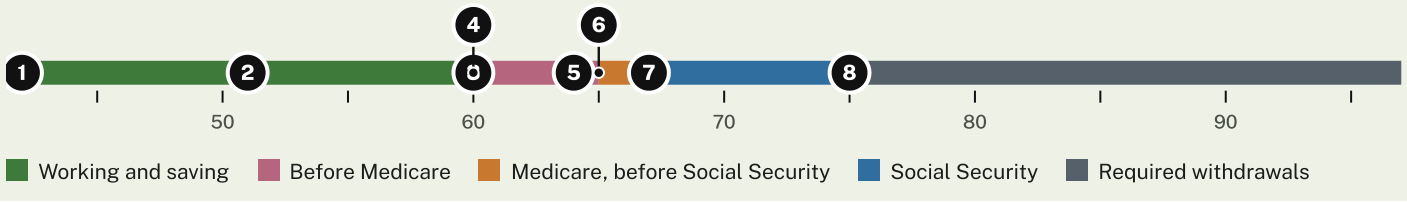

Sam's age	Stage	Saving per month
42 to 46	A child at school	$2,935
46 to 51	A teenager	$2,798
51 to 52	A teenager, College	$1,085
52 to 55	Empty nest, College	$3,210
55 to 60	Empty nest	$4,335

The road from here

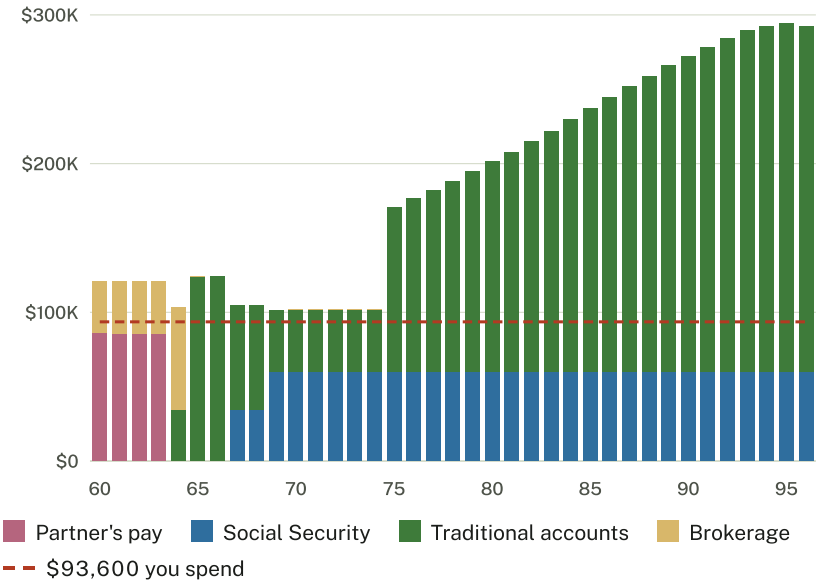

18 years more of saving, then 37 years of retirement.

The steep part of the trail is the seven years from retiring to Social Security. Savings carry everything then: the spending, the tax and health insurance until Medicare. From 69, Social Security covers most of what you spend. Jordan keeps working for a while after Sam retires, and that pay comes first.

The trail, by Sam's age

Each year of retirement, by where the money comes from

Year one, at 60

$34,941

comes out of your savings: $7,600 toward spending, $4,486 in tax.

From 75

Required withdrawals take out more than you spend. What's left after tax is reinvested in a brokerage account.

Points along the way

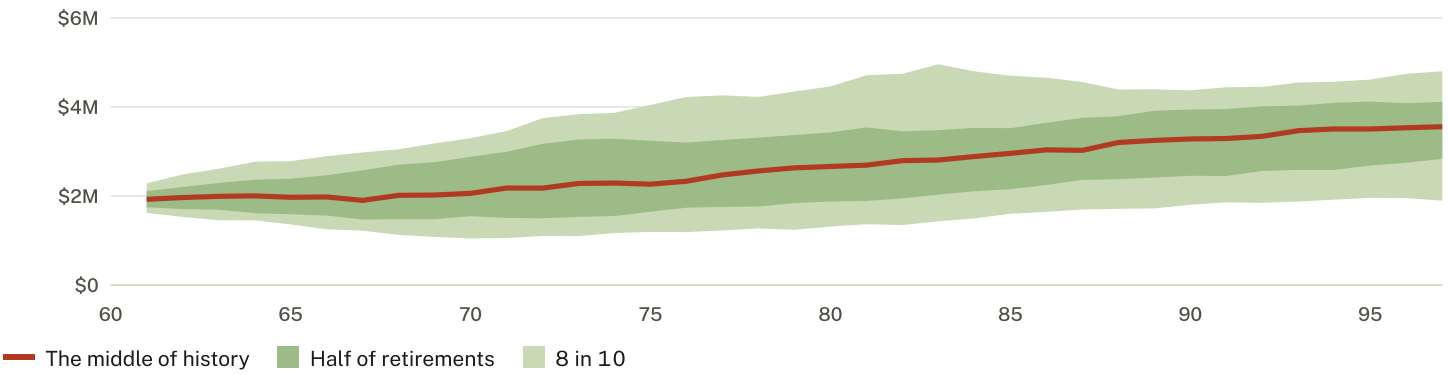

1. **Today, 2026.** Sam 42, Jordan 40.
2. **Nora's college begins, 2035.** 4 years of it.
3. **Mortgage paid off, 2044.** At today's payment.
4. **Sam retires, 2044.** Sam 60, Jordan 58.
5. **Jordan retires, 2048.** Sam 64, Jordan 62.
6. **Medicare, 2049.** At 65 for each of you.
7. **Social Security, 2051.** Each of you claims at 67.
8. **Required withdrawals, 2059.** The IRS sets a minimum from traditional accounts.

Every figure in today's dollars. Dashed figures are estimated.

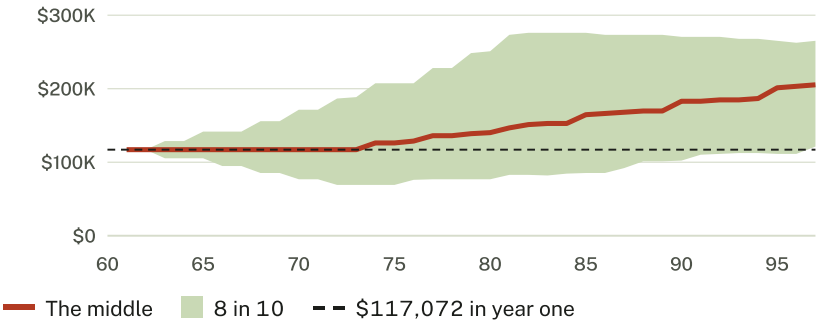

Every starting month from 1926 to 1989: it lasted in all 751.

The Retirement tab's simulator runs your savings at 60 through what really happened to stocks, bonds and inflation from each month on, drawing down with **Guyton-Klinger Guardrails**: steady spending with a cut or a raise when the withdrawal rate drifts too far. The mix: 60% stocks, 40% bonds.

Savings each year of retirement, across history

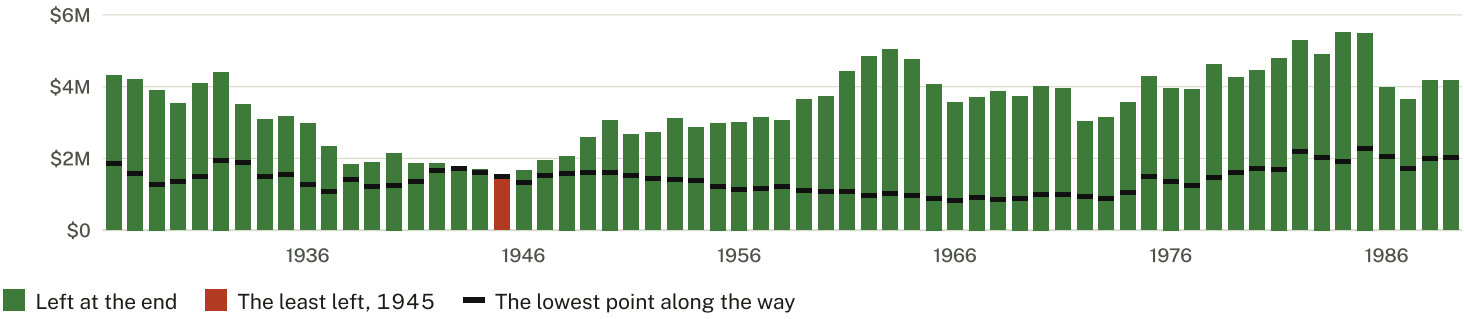

Spending each year, across history

Your strategy moves spending

Guyton-Klinger Guardrails spends more after good years and less after bad ones, which is why it lasts more often. In the leanest tenth of history, spending fell to about **$69,130** per year at its lowest, against $117,072 in year one.

What was left at 97, by the January retirement started

100%
of starting months lasted to 97

$3.56M
left at 97 in the middle of history

Lowest points	Lowest	At age	Left at 97
Started 1966	$852,878	69	$3,566,061
Started 1968	$878,424	74	$3,871,304
Started 1973	$890,341	69	$3,147,758

Past returns don't predict future ones.

$5,000 per month together, each claiming at 67.

Each of you gets a benefit from your own work record, or up to half the other's full benefit if that's more. Claiming before full retirement age shrinks a benefit for life. Each year of waiting past it raises the benefit 8%, up to 70.

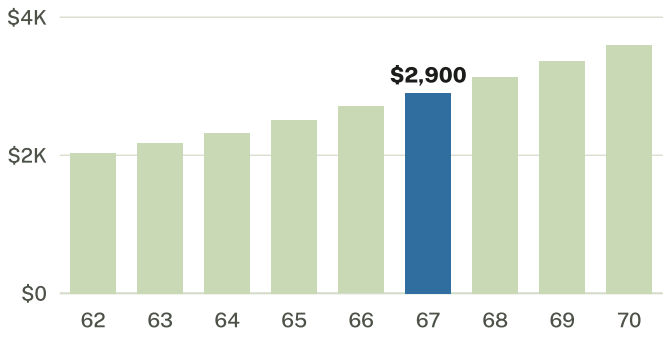

Sam

$2,900
per month, claiming at 67

$2,900
per month at full retirement age, 67

From your Social Security statement.

Claiming at each age from 62 to 70

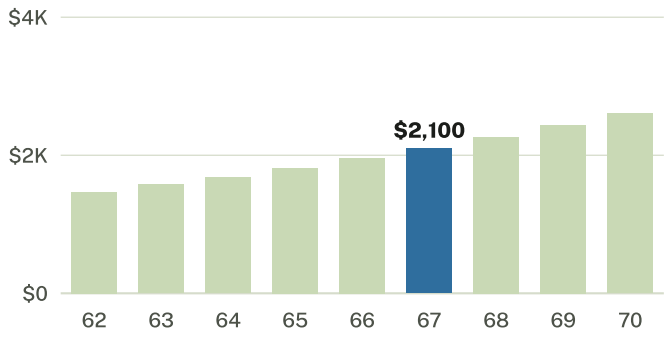

Jordan

$2,100
per month, claiming at 67

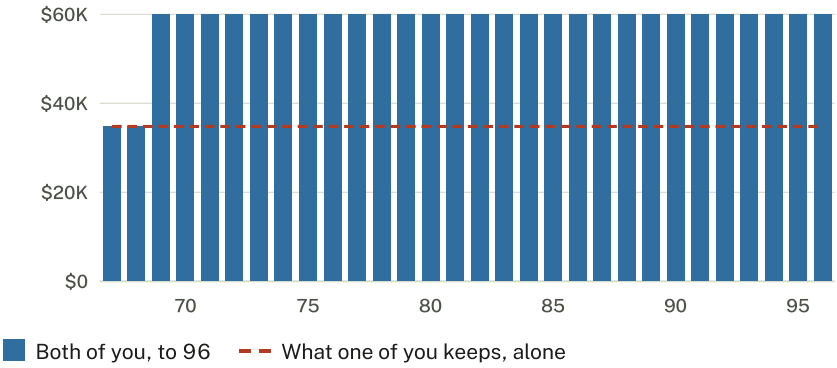

$2,100
per month at full retirement age, 67

From your Social Security statement.

Claiming at each age from 62 to 70

Social Security each year, by Sam's age

When one of you dies

$2,900

per month for the survivor: the larger of the two benefits carries on and the smaller one stops.

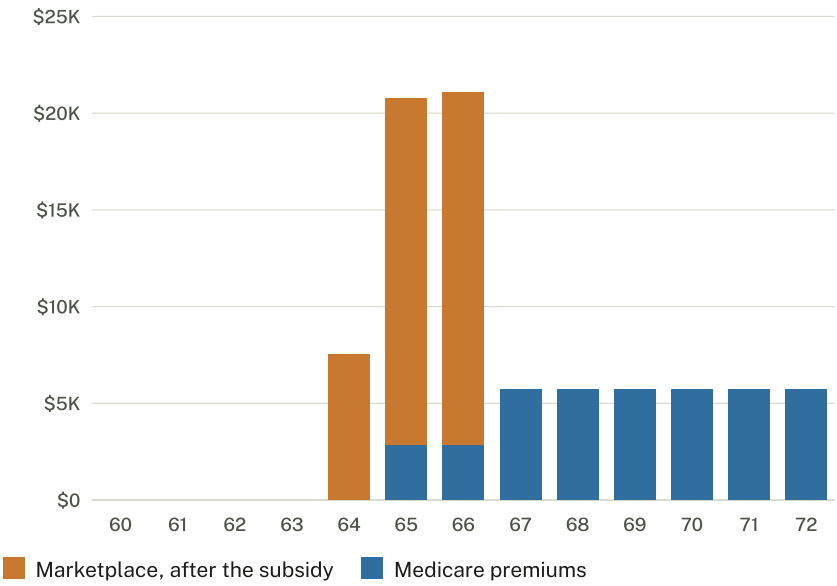

Why it matters

The higher earner's claiming age sets the survivor's benefit too, which is why waiting often pays off for couples.

Three years of health cover to buy, 2048 to 2051: about $43,648 in all.

You both stop work by 2048. Sam reaches Medicare in 2049 and Jordan reaches Medicare in 2051. Until then, cover is a marketplace plan, and its subsidy depends on income: what you take out of your accounts. The withdrawal plan and the health bill move together.

Health insurance each year, by Sam's age

The costly stretch

$21,052

per year at 66, the most of any year.

From 67

Both on Medicare: $5,710 per year in premiums.

$7,545

in 2048, the first year on the marketplace

358%

of the poverty line: your income for the subsidy that year

$14,549

per year on average before Medicare

What you can do

Get real quotes a year before you retire. The figures here are estimates after the subsidy. Real prices depend on your county and the plan you pick.

Watch your income in these years. Taking more out of traditional accounts, or converting to Roth, raises income and shrinks the subsidy. Health cover on the Retirement tab shows the trade.

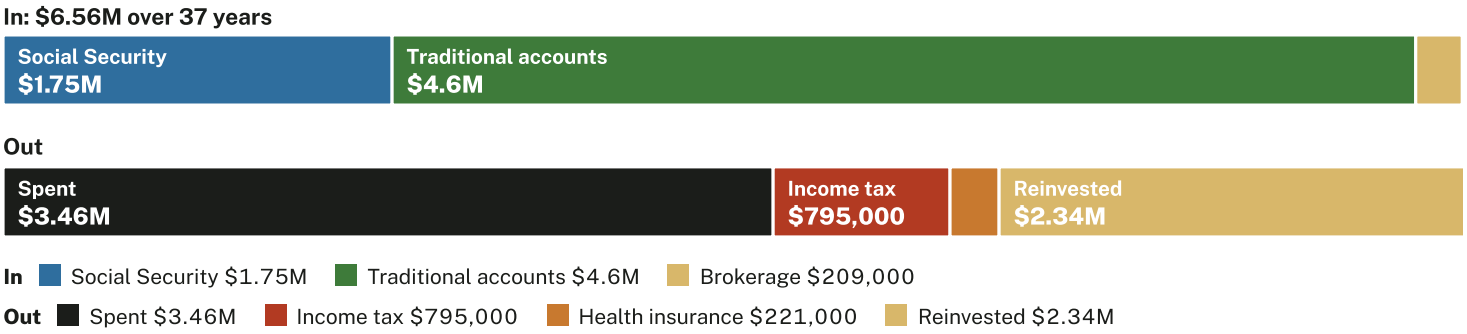

Plan for the years one of you is on Medicare and the other isn't. The household subsidy changes when the first of you moves to Medicare.

Where the money comes from

Over 37 years, $6.56M comes in. Social Security is 27% of it.

Withdrawals from traditional accounts are taxed as income, Roth withdrawals aren't, and brokerage withdrawals are taxed only on their gains. The order the plan draws them in is brokerage, then traditional, then Roth. Required withdrawals from 75 pull out more than you spend. After tax the rest is reinvested.

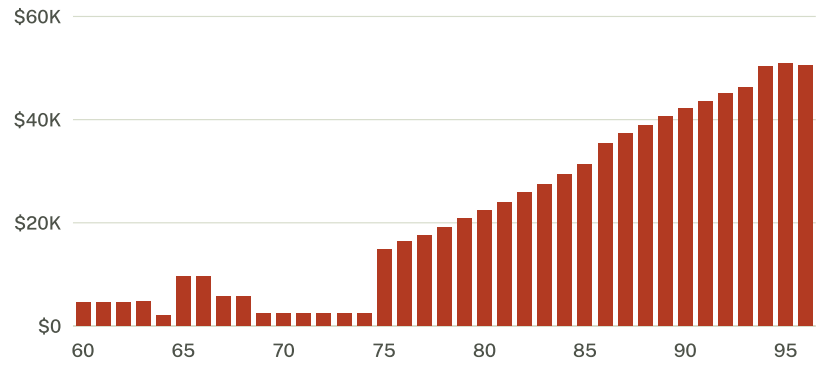

Every dollar of retirement, in and out

In Social Security $1.75M · Traditional accounts $4.6M · Brokerage $209,000

Out Spent $3.46M · Income tax $795,000 · Health insurance $221,000 · Reinvested $2.34M

Income tax each year

The Medicare surcharge, when there is one, is counted with the tax.

Tax over the whole retirement

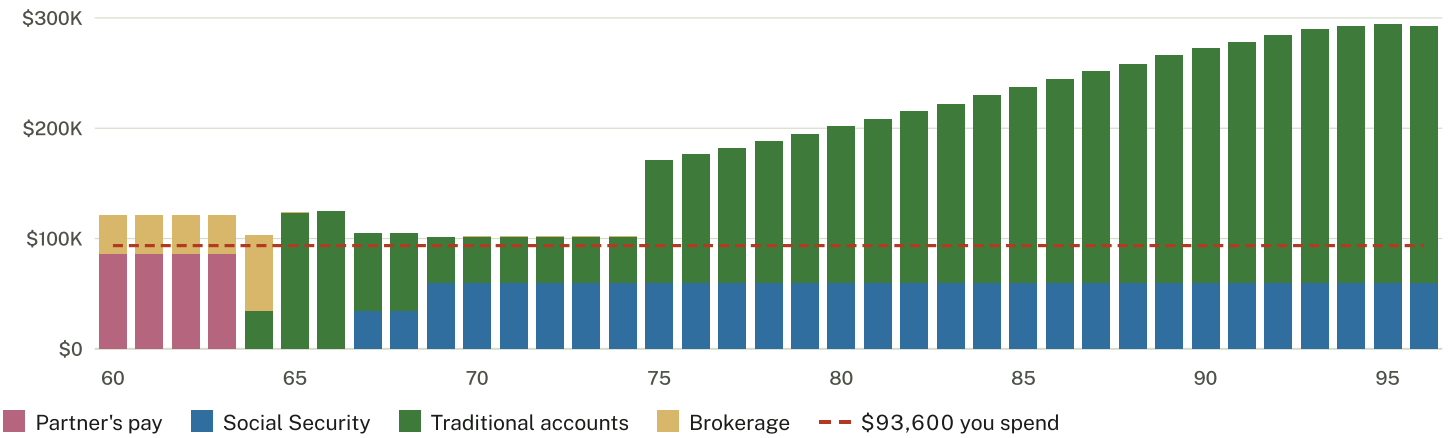

$795,489

on the plan's steady path, about $23,548 in a typical year.

Where to look

92% of it comes after 75, from required withdrawals. Roth conversions in lower-tax years before then can move some of it earlier at a lower rate; the Retirement Plan Optimizer in Tools tests that.

Each year of retirement, by source

Every figure in today's dollars. Dashed figures are estimated.

Your readiness score

96 out of 100: on track, with two areas still to finish.

The readiness score adds up five areas, weighted by how much each matters. The retirement outlook, whether the plan lasts, counts most at 40 points. Emergency savings and debt are worth 15 each: they can derail a plan before it reaches retirement.

Your 96 points, area by area

Retirement outlook	Savings rate	Emergency fund	Debt	Cash flow
40 of 40	**20** of 20	**11** of 15, 4 to earn	**15** of 15, 0 to earn	**10** of 10

Retirement outlook worth 40 points	100% of historical retirements lasted to ages 97 and 95 with Guyton-Klinger Guardrails. Full marks take about 95%; the plan aims for 90%.	**40** / 40
Savings rate worth 20 points	You save 16.5% of gross income. About 15% of pay before taxes is a common goal, and less is fine once the plan shows it's enough.	**20** / 20
Emergency fund worth 15 points	3.1 months of spending set aside in cash, and the score gives full marks at 6 months. Your own goal, set on Spending, is 6 months, $46,800. • Set aside $22,800 more. • Add an emergency fund line on Taxes & Savings.	**11** / 15
Debt worth 15 points	$14,500 owed. Debt at 8% or more costs more than most saving earns.	**15** / 15
Monthly cash flow worth 10 points	$6,010 per month is left of what comes in after taxes, after spending $7,800 per month.	**10** / 10

What the score means

Score	Rating	What it says
85 and up	**On track** · yours, 96	The plan holds up well against history and the basics are in place.
70 to 84	**Nearly there**	A strong plan with one or two areas to finish.
50 to 69	**Getting there**	The foundations are there. The plan needs more saving or a later date.
30 to 49	**Needs work**	Several areas need attention before the plan holds up.
0 to 29	**Needs attention**	Start with the first step on the list: it does the most.

Every figure in today's dollars. Dashed figures are estimated.

Eight steps to take, the ones that do the most first.

Each step names the Dashboard tab where it's done. The ones that raise your readiness score the most come first; the rest sharpen the plan's figures.

Start here

The steps that do the most

1. **Save $527 per month for college**
   You plan to help with college, and saving ahead keeps it out of your saving later.
   On Spending
2. **Plan health cover until Medicare**
   3 years with no job's plan, 2048 to 2051.
   On Retirement
3. **Build 6 months of cash**
   You have 3.1 months set aside.
   On Spending
4. **Saving drops to $2,800 per month in 2030, with the match**
   A teenager: see how each stage saves.
   On Calculator

Your assumptions: balanced.

Your plan's guesses about the future are balanced. Savings at retirement come to **$1.89M** with your figures and **$1.95M** with every guess balanced. Each guess is also run balanced on its own; the difference is what it adds or takes away.

Very conservative | Conservative | **Balanced** | Aggressive | Very aggressive

Assumption	Yours	Balanced, and its range	Rating	Effect at retirement
GROWTH				
Growth, before inflation	7.6% per year	7.6% 6.1% – 9.2%	Balanced	—
Inflation	3% per year	3% 2.4% – 3.6%	Balanced	—
YOUR LIFE				
Raises, beyond inflation	0% per year	0.9% 0.1% – 1.6%	Conservative	–$59,000
What the children cost	The typical costs	The typical costs 85% – 115% of typical	Balanced	—
RETIREMENT				
Social Security	100% of the benefit	90% 80% – 100%	Balanced	+$119,000*
How long the plan runs	To age 95, the younger of you	To age 95 ages 92 – 98	Balanced	—

* Social Security and how long the plan runs don't change savings at retirement; these say what the difference in the years they change is worth then.

Where the balanced figures come from

Social Security. The trust fund that pays Social Security is projected to run short in 2034. After that, about 80% of benefits could be paid unless Congress acts. Anywhere from that to the full benefit is balanced.

Raises, beyond inflation. How fast pay grows beyond inflation. Pay usually climbs fastest early in a career and levels off in the 50s; the balanced figure is the typical raise from your age to retirement, on average (pay by age from Census and Social Security earnings records, with the economy's own growth in pay on top).

Growth, before inflation. What savings earn each year until you retire. Since 1926, US stocks have earned about 7% per year after inflation and bonds about 2%; stocks worldwide have earned about 5%. A mix of the two at about 4.5% after inflation (7.6% at 3% inflation) is balanced. Stock prices are high today (a CAPE of 39.8), which has usually meant lower returns in the decade after.

Inflation. How fast prices rise. US consumer prices have risen about 3% per year on average since 1926. The Federal Reserve aims for 2%, but on a measure that usually runs a few tenths below consumer prices, and prices have run above that for long stretches, so 2% here is on the hopeful side. Growth less inflation is what savings really gain, so with growth held where it is, lower inflation makes the plan look better.

What the children cost. What raising a child costs from birth to 18. The typical costs are what middle-income families spend on a child (the USDA's study, brought to today's prices), plus childcare where it's paid, with a second or later child costing 20% less. Today's spending already pays for the children you have, so what counts is how their costs change: lower costs here also mean less freed up for saving once they're grown.

How long the plan runs. How long savings have to last. Of people who reach 65, about 1 in 4 live past 90 and about 1 in 10 past 95. Planning to 95 covers most lifespans; planning to a younger age makes the plan look better than it may turn out.

What this plan is built on.

Everything on your Dashboard that feeds the figures, and how they're worked out. Change any of it on the Dashboard and print a new report. For an advisor: the method is on the right, and the plan's years follow.

Your figures

Social Security	**Checked, from a statement**
Share of benefits counted	**100%**
Balances	**By account, October 20, 2026**
Spending	**From the budget**

Method

Saving. Today's balances grow at 4.50% per year after inflation, account by account, with each saving line growing as you set it and stopping at its legal limit, children's costs taken out in the years they come.

Retirement. The Drawdown Simulator runs the savings at 60 through every starting month since 1926 with 37 years of history after it: 751 retirements, with Guyton-Klinger Guardrails. The share that lasted is the chance of success.

Tax and health. Each year's federal and Illinois income tax, the Medicare surcharge and marketplace premiums before 65 are worked out on the plan's steady path from where that year's money comes from, and paid on top of spending.

Readiness. Five areas: the retirement outlook (40 points), savings rate (20), emergency fund (15), debt (15) and cash flow (10).

Fine print

RetCalc is an educational tool, not financial, tax or legal advice. Past returns don't predict future ones. Tax rules are this year's, held in today's dollars. Everything was calculated in your browser.

Words used in this report

Today's dollars	Every future amount shrunk by inflation, so it means what it would buy now.
Net worth	Everything you have, the home included, less everything you owe.
Chance of success	The share of historical retirements, one per starting month, in which the money lasted to the plan's end.
Steady path	The plan at its average return every year, used for the year-by-year tables and taxes.
Required withdrawals	The minimum the IRS makes you take from traditional accounts each year from 75 (RMDs).
Marketplace subsidy	The tax credit that lowers health insurance bought on healthcare.gov before Medicare; it shrinks as income rises.

Saving year by year

Each year to 60 at a steady 4.50% after inflation: what goes in each month by account, and the savings at the year's end. Real years swing around it.

Year	Sam	Jordan	Traditional	Roth and HSA	Brokerage	Per month	Per year	Savings at year end
2026	42	40	$2,935	–	–	$2,935	$35,220	$452,330
2027	43	41	$2,935	–	–	$2,935	$35,220	$508,060
2028	44	42	$2,935	–	–	$2,935	$35,220	$566,297
2029	45	43	$2,935	–	–	$2,935	$35,220	$627,155
2030	46	44	$2,798	–	–	$2,798	$33,576	$689,101
2031	47	45	$2,798	–	–	$2,798	$33,576	$753,834
2032	48	46	$2,798	–	–	$2,798	$33,576	$821,480
2033	49	47	$2,798	–	–	$2,798	$33,576	$892,171
2034	50	48	$2,798	–	–	$2,798	$33,576	$966,042
2035	51	49	$1,085	–	–	$1,085	$13,014	$1,022,591
2036	52	50	$2,935	–	$275	$3,210	$38,520	$1,107,297
2037	53	51	$2,935	–	$275	$3,210	$38,520	$1,195,815
2038	54	52	$2,935	–	$275	$3,210	$38,520	$1,288,316
2039	55	53	$2,935	–	$1,400	$4,335	$52,020	$1,398,539
2040	56	54	$2,935	–	$1,400	$4,335	$52,020	$1,513,722
2041	57	55	$2,935	–	$1,400	$4,335	$52,020	$1,634,088
2042	58	56	$2,935	–	$1,400	$4,335	$52,020	$1,759,871
2043	59	57	$2,935	–	$1,400	$4,335	$52,020	$1,891,313
Total							**$697,000**	**$1,891,305**

Per month figures include the employer match. Balances on the steady path.

Retirement year by year

Every year of retirement on the plan's steady path, the average return for your mix. Real years swing around it; page 10 shows how far. Withdrawals cover spending, tax and health insurance.

Year	Sam	Jordan	Partner's pay	Social Security	Traditional	Roth / brokerage	Income tax	Health	Reinvested	Balance at year
2044	60	58	$86,000	–	–	$34,941	$4,486	–	–	$1,976
2045	61	59	$86,000	–	–	$35,020	$4,564	–	–	$2,067
2046	62	60	$86,000	–	–	$35,092	$4,637	–	–	$2,162
